

Stakeholder Map & Strategy

Influence x Interest matrix

Stakeholder	Influence	Interest	Quadrant	Stance	Evidence / reason
Thủ trưởng	High	High	Champion	Ủng hộ	Confirmed team stakeholder; decides value, feasibility, risk, and approval to proceed.
Trợ lý Thủ trưởng	High	Low	Blocker	Chưa ủng hộ / cần được thuyết phục thêm	Confirmed high-influence stakeholder; needs clarity on benefit, data, scope, and accountability.
Phòng AI	Low	High	Supporter	Ủng hộ	Confirmed technical stakeholder for cleaning quality, matching logic, and evaluation review.
Phòng Phần mềm	Low	High	Supporter	Trung lập	Confirmed technical stakeholder for integration, deployment, access controls, and maintainability review.
Nguyễn Quang Huy	High	High	Champion	Ủng hộ	Confirmed internal core stakeholder; product, integration, and release ownership.
Trần Thị Kiều Trang	Execution	High	Supporter	Ủng hộ	Confirmed internal core stakeholder; UX, frontend, and stakeholder communication ownership.
Nguyễn Quý Dũng	Execution	High	Supporter	Ủng hộ	Confirmed internal core stakeholder; AI, data, and backend ownership.

Leverage: 2 priority stakeholders

Thủ trưởng: align MVP scope, risk controls, and approval to proceed.
Phòng AI: review cleaning/matching quality and evaluation criteria.

Persuade / de-risk: 2 priority stakeholders

Trợ lý Thủ trưởng: address benefit, data, scope, and accountability concerns.
Phòng Phần mềm: de-risk API boundaries, tenant isolation, and deployment assumptions.

Concrete actions for the next 1-2 weeks

- 1 Send a one-page MVP scope and architecture/risk-control summary to Thủ trưởng.
- 2 Run a short technical review with Phòng AI before the demo milestone.
- 3 Present the controlled demo flow to Trợ lý Thủ trưởng and capture concerns.
- 4 Share the API/architecture flow with Phòng Phần mềm before architecture freeze.

Pitch & RACI

CONCLUSION FIRST

Team 42 đề xuất tiếp tục DataUnifi tới một MVP/demo nội bộ có kiểm soát, tập trung chứng minh AI Data Cleaning và Entity Matching trước khi cân nhắc mở rộng.

Audience: Thủ trưởng

2-3 REASONS

- DataUnifi xử lý vấn đề dữ liệu khách hàng phân mảnh và không nhất quán giữa nhiều nguồn.
- Human approval, deterministic execution, dry-run/rollback, consent, masking, and audit log reduce operational risk.
- MVP giới hạn cho phép đánh giá tính khả thi và chất lượng trước khi mở rộng.

EVIDENCE

Evidence: PROJECT_SUMMARY.md documents multi-tenant isolation, CSV ingestion, AI cleaning suggestions, deterministic execution, matching, consent, masking, and audit logging. This is documented design evidence; no production validation or business metrics are claimed.

SMALL ASK

Small ask: approve the controlled MVP/demo scope and acceptance criteria for the next milestone.

OBJECTION + RESPONSE

AI chưa đủ đáng tin để cho phép xử lý hoặc liên kết dữ liệu quan trọng.

DataUnifi chỉ dùng AI để đề xuất cleaning, mapping, and weighting. Người dùng review; thay đổi được dry-run; approved rules chạy bằng deterministic engine; uncertain matches vào vùng review; cross-tenant data dùng consent, masking, and audit.

Risk-reduction logic

Controlled scope, named acceptance criteria, documented result, then a deliberate go / revise decision.

RACI - one A and at least one R per task

Task	Huy	Trang	Dũng	Stakeholder
Chốt use case, MVP scope và acceptance criteria	A/R	C	C	Thủ trưởng: I
Multi-tenant data model, access control và consent flow	C	I	A/R	Phòng Phần mềm: C
AI Data Cleaning + deterministic execution workflow	C	I	A/R	Phòng AI: C
Entity Matching: mapping, blocking, scoring, review	C	I	A/R	Phòng AI: C
Frontend workflow: upload, review, approval, masking	C	A/R	C	Phòng Phần mềm: C
Integration, QA, demo/release readiness	A	R	R	Phòng AI: C; Phòng Phần mềm: C; Thủ trưởng: I

R = Responsible | A = Accountable | C = Consulted | I = Informed

AI Team Design

ARCHITECTURE

Embedded

Team hiện có 3 core members và năng lực AI/Data gắn trực tiếp vào DataUnifi. Embedded giúp product, frontend/integration và AI/backend làm việc trong cùng squad thay vì tạo một AI hub riêng không phù hợp quy mô hiện tại.

CORE ROLES - needed now

- Nguyễn Quang Huy — Product / Integration / Release ownership
- Trần Thị Kiều Trang — UX / Frontend / Stakeholder communication
- Nguyễn Quý Dũng — AI / Data / Backend
- Shared — Evaluation / QA

EXTENDED ROLES - when scaling

- Security / Privacy review — before real-data pilot
- MLOps / observability — when release scale requires it
- Domain/data governance expert — when pilot scope requires it

CAPABILITY GAPS + PRIORITY RESOURCING

Capability gap	Route	Partner	Why	When needed
AI evaluation baseline	Partner + build internally	Phòng AI	Team cần tiêu chí chất lượng khách quan cho cleaning suggestions và entity matching.	Trước milestone demo/pilot-readiness.
Integration / deployment review	Partner	Phòng Phần mềm	Cần review API boundaries, deployment assumptions, access controls, and maintainability.	Trước khi freeze MVP architecture.
Security / privacy governance at pilot stage	Partner	Đơn vị/reviewer security/privacy được tổ chức chỉ định	Multi-tenant customer data và cross-tenant matching cần review privacy/security trước real-data pilot.	Trước real-data pilot.

SQUAD GOAL

Team 42 sở hữu MVP DataUnifi và chịu trách nhiệm đưa workflow AI Data Cleaning + Entity Matching từ thiết kế hiện tại đến một demo end-to-end có human approval, tenant isolation, consent, masking, auditability và acceptance criteria rõ ràng.

Team Health & Growth Plan

Dimension	Huy	Trang	Dũng	Team Summary
AI Quality	4	4	4	Average 4.00/5
Progress	4	4	3	Average 3.67/5
Team Morale	4	5	4	Average 4.33/5
Shipping Speed	3	3	3	Average 3.00/5

PRIORITY ISSUE

Priority for next milestone: Shipping Speed is lowest (average 3.00/5). Freeze MVP scope and run the end-to-end demo checklist to protect release readiness; the AI evaluation baseline remains the enabling quality action.

COMPETENCY

Role: AI / Data / Backend | Owner: Nguyễn Quý Dũng | Current/nearest level: L2 — AI Practitioner | Next competency: AI evaluation / quality evaluation | 30-day practice: build golden cases for cleaning + matching and run regression evaluation before each milestone/release candidate.

GROWTH PLAN - 30 DAYS

Problem	30-day action	Owner	Deadline	Completion signal
AI quality needs a repeatable acceptance baseline.	Build a golden test set and evaluation checklist for cleaning + matching.	Nguyễn Quý Dũng	14 days after confirmation (2026-09-12)	Golden cases are stored in project artefacts and a reproducible evaluation report is linked to a release candidate.
The project design needs a demonstrable vertical slice.	Freeze MVP scope and complete an end-to-end demo script from CSV upload through cleaning, review, matching, masked result, and audit flow.	Nguyễn Quang Huy	21 days after confirmation (2026-09-19)	The demo checklist runs end-to-end against the confirmed acceptance criteria.
Stakeholder interest must become actionable feedback.	Prepare a review package and hold a checkpoint with priority stakeholders, recording issues, decisions, and next actions.	Trần Thị Kiều Trang	30 days after confirmation (2026-09-28)	A review note contains feedback, decisions, and the next action.

CONFIRMATION RECORD

All required Day 27 team inputs were confirmed by team/user on 2026-08-29: goal, stakeholder classification, six-task RACI, Embedded architecture, individual evidence artefacts, twelve health scores, L2 competency, and three growth commitments.
